

9/11:

Blueprint for Truth

The Architecture of Destruction

with Architect Richard Gage, AIA

Wednesday, Oct 24, 7PM

Mt. Diablo Peace and Justice Center

55 Eckley Lane, Walnut Creek, CA

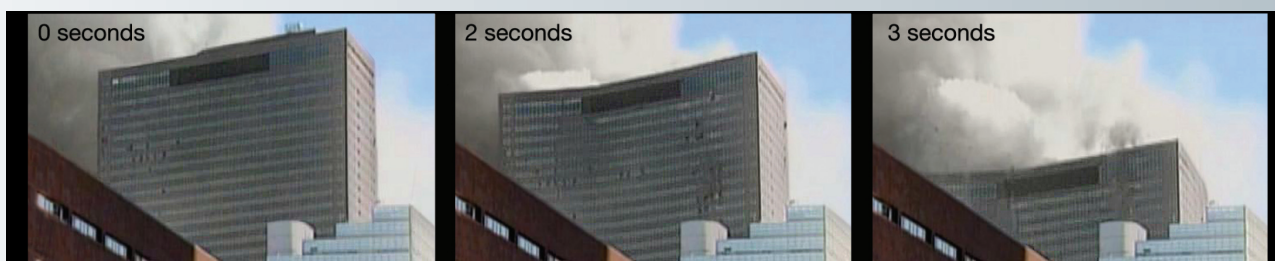

Did you know that:

- 118 first responders witnessed flashes and explosions?
- Tons of molten iron was "flowing like lava" under the buildings?
- Thermite, a chemical used to cut steel, was found in the WTC dust?
- Three buildings fell on 9/11, including Building 7, a 47-story skyscraper that fell at nearly free fall speed into its own footprint?

Examine these issues and more with architect Richard Gage, AIA, founder of Architects and Engineers for 9/11 Truth. For more information, visit ae911truth.org

Richard Gage, AIA, has been a practicing Architect for 20 years and has designed numerous fire protected steel framed buildings. He is employed with a SF Bay Area architecture firm and has most recently performed Construction Administration services for a new local \$120M High School campus. He became interested in the 9/11 WTC high-rise "Collapses" after hearing the startling conclusions of a reluctant 9/11 researcher, David Ray Griffin, on the radio in May of 2006, which launched his own unyielding quest for 9/11 Truth.
